GCC RUNTIME LIBRARY EXCEPTION

Version 3.1, 31 March 2009

Copyright © 2009 Free Software Foundation, Inc. <https://fsf.org/>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing allowed.

This GCC Runtime Library Exception ("Exception") is an additional permission under section 7 of the General Public License, version 3 ("GPLv3"). It applies to a given file (the "Runtime Library") that be notice placed by the copyright holder of the file stating that the file is governed by GPLv3 along with the Exception.

When you use GCC to compile a program, GCC may combine portions of certain GCC header files and runtime libraries with the compiled program. The purpose of this Exception is to allow compilation of GPL (including proprietary) programs to use, in this way, the header files and runtime libraries cover this Exception.

0. Definitions.

A file is an "Independent Module" if it either requires the Runtime Library for execution after a Comp Process, or makes use of an interface provided by the Runtime Library, but is not otherwise based on Runtime Library.

"GCC" means a version of the GNU Compiler Collection, with or without modifications, governed by 3 (or a specified later version) of the GNU General Public License (GPL) with the option of using any subsequent versions published by the FSF.

"GPL-compatible Software" is software whose conditions of propagation, modification and use would combination with GCC in accord with the license of GCC.

"Target Code" refers to output from any compiler for a real or virtual target processor architecture, in executable form or suitable for input to an assembler, loader, linker and/or execution phase. Notwithstanding that, Target Code does not include data in any format that is used as a compiler intermediate representation, or used for producing a compiler intermediate representation.

The "Compilation Process" transforms code entirely represented in non-intermediate languages desig human-written code, and/or in Java Virtual Machine byte code, into Target Code. Thus, for example, source code generators and preprocessors need not be considered part of the Compilation Process, si Compilation Process can be understood as starting with the output of the generators or preprocessors
A Compilation Process is "Eligible" if it is done using GCC, alone or with other GPL-compatible softw if it is done without using any work based on GCC. For example, using non-GPL-compatible Software optimize any GCC intermediate representations would not qualify as an Eligible Compilation Process

1. Grant of Additional Permission.

You have permission to propagate a work of Target Code formed by combining the Runtime Library Independent Modules, even if such propagation would otherwise violate the terms of GPLv3, provide all Target Code was generated by Eligible Compilation Processes. You may then convey such a combi under terms of your choice, consistent with the licensing of the Independent Modules.

2. No Weakening of GCC Copyleft.

The availability of this Exception does not imply any general presumption that third-party software is unaffected by the copyleft requirements of the license of GCC.
